Views Bulk Operations - views_bulk_operations

The screenshot displays the 'Bulk Operations' interface. At the top, there are buttons for 'View', 'Edit', 'Clone', and 'Export'. Below these are two dropdown menus: 'State' and 'Author'. The 'State' dropdown is open, showing options: '<All>', '(creation)', 'Draft' (highlighted), 'Edit', 'Copy Edit', and 'Publish'. The 'Author' dropdown is also open, showing options: '<All>', 'bastow', 'betehidroK', 'brep', 'brohibefrus', 'bromahutaw', 'buph', and 'buth'. A 'Submit' button is located to the right of these dropdowns.

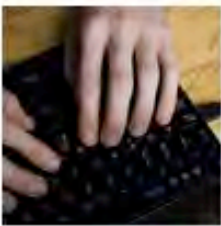

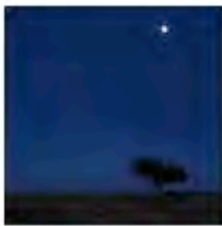

Below the filters, a dropdown menu is open, showing a list of actions. The first action, 'Change workflow state of a node to next state (action)', is highlighted. Other actions include 'Publish node (action)', 'Unpublish node (action)', 'Make node sticky (action)', 'Make node unsticky (action)', 'Promote node to front page (action)', 'Remove node from front page (action)', 'Change node author (action)', 'Publish (node operation)', 'Unpublish (node operation)', 'Promote to front page (node operation)', 'Demote from front page (node operation)', 'Make sticky (node operation)', and 'Remove stickiness (node operation)'. An 'Execute' button is visible to the right of the dropdown.

Below the dropdown, a table of nodes is visible. The table has columns for 'State', 'Author', 'Created', and 'Changed'. The first row is highlighted in blue. The second row is also highlighted in blue and has a checked checkbox in the first column.

State	Author	Created	Changed	Actions

WYSIWYG - wysiwyg

The screenshot shows a WYSIWYG text editor interface. At the top, there is a toolbar with various icons for text formatting, alignment, and editing. Below the toolbar, there are dropdown menus for 'Styles', 'Format', 'Font', and 'Size'. The main content area displays a page with the following text:

Little Red Riding Hood

"Little Red Riding Hood" is a famous [fairy tale](#) about a young girl's encounter with a wolf. The story has been changed considerably in its history and subject to numerous modern adaptations and readings.

The version most widely known today is based on the [Brothers Grimm](#) variant. It is about a girl called Little Red Riding Hood, after the red [hooded cape](#) or [cloak](#) she wears. The girl walks through the woods to deliver food to her sick grandmother.

A wolf wants to eat the girl but is afraid to do so in public. He approaches the girl, and she naïvely tells him where she is going. He suggests the girl pick some flowers, which she does. In the meantime, he goes to the grandmother's house and gains entry by pretending to be the girl. He swallows the grandmother whole, and waits for the girl, disguised as the grandmother.

When the girl arrives, she notices he looks very strange to be her grandma. In most retellings, this eventually culminates with Little Red Riding Hood saying, "My, what big teeth you have!" To which the wolf replies, "The better to eat you with," and swallows her whole, too.

A [hunter](#), however, comes to the rescue and cuts the wolf open. Little Red Riding Hood and her grandmother emerge unharmed. They fill the wolf's body with

Workbench Access - workbench_access

The screenshot shows the 'Workbench Access' administration page. At the top, there is a dark blue header with the text 'Workbench Access' and a plus icon. To the right of the header are four tabs: 'EDITORS' (selected), 'ROLES', 'SECTIONS', and 'SETTINGS'. Below the header is a breadcrumb trail: 'Home » Administration » Configuration » Workbench'. The main heading is 'Editorial assignments by editor'. Below this heading is a paragraph: 'The following sections are currently active. You may [enable or disable sections](#).' Below the paragraph is a table with two columns: 'SECTION' and 'EDITORS'. The table lists various sections and their corresponding number of editors.

Workbench Moderation - workbench_moderation

The screenshot displays the 'Test draft title 2 History' page in a Drupal Workbench environment. The page features a navigation bar at the top with links like 'My Workbench', 'Tasks', 'Index', 'Dashboard', 'Content', 'Structure', 'Appearance', 'People', 'Modules', 'Configuration', 'Reports', and 'Help'. The user is logged in as 'admin'.

Below the navigation bar, there are tabs for 'VIEW PUBLISHED', 'VIEW DRAFT', 'EDIT DRAFT', 'MODERATE', and 'DEVEL'. The 'MODERATE' tab is active, and a 'Moderate' button is visible in the top right corner of the content area.

The main content area shows a table of revisions for 'Test draft title 2'. The table has columns for 'REVISION', 'TITLE', 'DATE', 'REVISION ACTIONS', and 'MODERATION ACTIONS'. The current revision (31) is highlighted in pink, indicating it is a draft. The published revision (30) is highlighted in green.

REVISION	TITLE	DATE	REVISION ACTIONS	MODERATION ACTIONS
31	Test draft title 3 Edited by admin. Revised by admin	08/26/2011 - 16:51	view	This is the current revision. The current state is Draft. Google Analytics - google_analytics

Google Analytics is a free web analytics service that tracks and reports website usage, helping you understand how your users use your site and what they do on your website.

GENERAL SETTINGS

Web Property ID*
UA-5181171

The ID is unique to each site you want to track separately, and is in the form of UA-XXXXXX-Y. To get a Web Property ID, request your site with Google Analytics, or if you already have registered your site, go to your Google Analytics settings page to see the ID next to every site profile. Find more information in the documentation.

Tracking script

Domain:
1 single domain

Pages:
All pages with transactions

Subs:
All subdomains

Event:
All event categories

Links and downloads:
Download links, Files from Content Manager, Products

Search and Referrer:
No tracking

What are you tracking?

A single domain (default)
Domain: example.com

One domain with multiple subdomains
Example: www.example.com, www.example.org, www.example.net

Multiple top-level domains
Example: www.example.com, www.example.org, www.example.net

List of top-level domains:

If you selected "Multiple top-level domains" above, enter all related top-level domains. Add one domain per line. By default, the data in your reports only includes the path and name of the page, and not the domain name. For more information see [this help article](#) on tracking multiple domains.

CUSTOM VARIABLES

You can add Google Analytics Custom Variables here. These will be added to every page that Google Analytics tracking code appears on. Google Analytics will only accept custom variables if the name and value combined are less than 64 bytes after URL encoding. Keep the names as short as possible and expect long values to get trimmed. You may use tokens in custom variable values. Global and user tokens are always available, but not page, user tokens and event variables.

Slot	Name	Value	Scope
Slot number	Enter value	Current user state (name)	User <input checked="" type="checkbox"/>
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	The scope for the Custom Variable
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	Page <input type="checkbox"/>
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	The scope for the Custom Variable
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	Page <input type="checkbox"/>
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	The scope for the Custom Variable
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	Page <input type="checkbox"/>
Slot number	The custom variable name	The custom variable value. You may use tokens in this field.	The scope for the Custom Variable

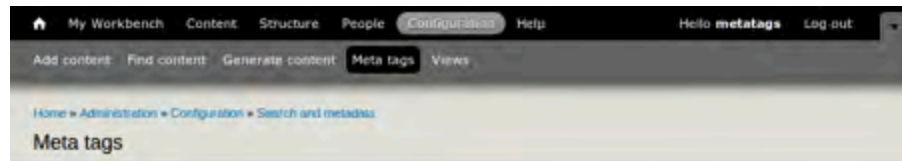

You can implement Google Analytics' built-in [Advanced Tracking](#) of content by implementing events based on custom variables. Section 5.7 of the [Google Analytics Help](#) will require you to make sure you set the dimension for content-type that you're interested in, then implement these code snippets on each third-party website with any personally identifying information from any source as part of your use of built-in third-party code of the Google Analytics service.

Name	Scope	Use Options
1. Current date	Page	Tracks content to the current date and time.
2. Current page	Page	Tracks content to the current page content.
3. Current user	Page	Tracks content to the currently logged-in user.
4. Subid	Page	Tracks content to individual content items, or "tokens".
5. Site information	Page	Tracks for site-wide settings and other global information.

Admin Menu - admin_menu

The screenshot shows the Drupal Admin Menu interface. At the top, there is a navigation bar with the following items: Content management, Site building, Site configuration, User management, Reports, and Help. On the right side of this bar, it displays '0 / 1', a user profile icon for 'sun', and a 'Log out' link. A dropdown menu is open under 'Content management', listing: Comments, Content, Content types, Image galleries, Image import, Post settings, RSS publishing, and Taxonomy. The 'Content types' item is selected, and a sub-menu is displayed with the following options: List, Add content type, Image, Page, Story, Delete, and Edit. The 'Story' item is selected, and a 'Story' configuration form is shown. The form has a title 'Story' and a section for 'Identification'. The 'Name' field is required (marked with an asterisk) and contains the text 'Story'. Below the field, there is a descriptive text: 'The human-readable name of this content type. This text will be displayed as part of the list on the *create content* page. It is recommended that this name begin with a capital letter and contain only letters, numbers, and **spaces**. This name must be unique.' The 'Type' field is also required (marked with an asterisk) but is currently empty.

▼ PER CONTENT NODE ACCESS CONTROL SETTINGS

Optionally you can enable per content node access control settings. If enabled, a new tab for the content access settings appears when viewing content. You have to configure permission to access these settings at the [permissions](#) page.

- Enable per content node access control settings

▼ ADVANCED

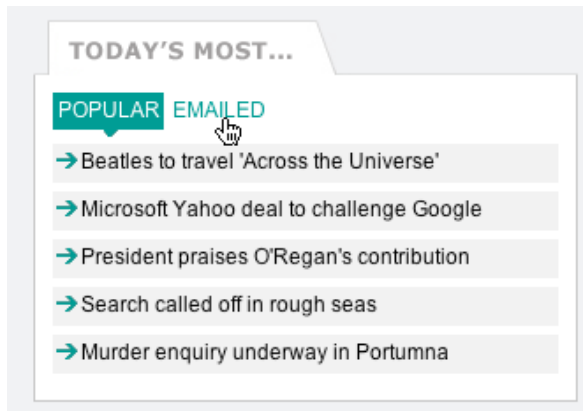

Give content node grants priority

0 ▾

If you are only using this access control module, you can safely ignore this. If you are using multiple access control modules you can adjust the priority of this module.

Panels - panels

Quick Tabs - quicktabs

The image shows a 'Quick Tabs' widget from Drupal. It has a title 'TODAY'S MOST...' and two tabs: 'POPULAR' (selected) and 'EMAILED'. Below the tabs is a list of five news items, each with a right-pointing arrow icon:

- Beatles to travel 'Across the Universe'
- Microsoft Yahoo deal to challenge Google
- President praises O'Regan's contribution
- Search called off in rough seas
- Murder enquiry underway in Portumna

From minutes of installing and configuring Drupal, you can have a feature-rich, database-driven site with no knowledge of programming required. And you can add off-the-shelf contributed modules to add even more features to your site.

If you need something beyond what comes with the basic installation and the multitude of contributed modules, you'll need to be familiar with PHP and databases (mainly MySQL), or be willing to learn about them, or be ready to pay someone for their services.

If you're familiar with developing, you'll want to spend time learning Drupal's API and read through the Developer's Guide. The mailing lists and archives are also a good source of information for development.

In our forums we have many vigorous discussions over various approaches and viewpoints. And some of us help the community by providing free support. To make the forums more pleasurable and productive for all, please read and keep in mind the forum posting tips.
