

Sass/Compass

**Or how it finally clicked and
I learned to love preprocessors**

• • • • •

hackmonkey.com**

Why?

“Because CSS is Hard”

- Chris Eppstein

History

In the beginning...

CSS has always been a bit of trouble.

1980's- SGML had stylesheets

1990- Stylesheets goal of HTML from beginning

1995- HTML 2.0, no stylesheets

1996- CSS1 spec

- IE3 offers text support, no box support

1997- HTML 3.2 & HTML 4.0

- NN4 offers limited CSS support, only because of IE

History

1998- HTML4.0 & CSS2 spec

- Neither IE4 or NN4 support CCS1 well.

1999- CSS3 drafts start to show up.

- CSS3 broke into modules
- Browser prefix Hell
- IE5, Netscape fading fast

2013- CSS3 modules still evolving!

Firefox still requires -moz-box-sizing!

What is a preprocessor?

- Write in one syntax and output in a different syntax
- Extends CSS by writing a stylesheets in an extended meta-language format and compiling out to valid CSS.
- Emphasis on DRY (don't repeat yourself)
- No browser dependencies

What preprocessors can do

- **Variables**
- **Define & reuse common rules**
- **Automate common syntax**
- **Make minor changes to existing rules**
- **Better organization of rules**
- **Perform math calculations**

Sass & LESS

Sass - sass-lang.com

- Syntactically Awesome Stylesheets
- 2 syntax, (Sass, SCSS)
 - Identical functionality
- Ruby based app
- Compass support

LESS - lesscss.org

- Paired down version of Sass
- Javascript based app
- Influenced Sass v2 syntax

Sass

Sass

Sass {style with attitude}

sass-lang.com

(style with attitude)

```
$ gem install sass
$ mv style.css style.scss
$ sass --watch style.scss:style.css
```

[About](#)

[Tutorial](#)

[Documentation](#)

[Try Online](#)

Latest Release: Media Mark (3.2.10)

[What's New?](#)

Sass makes CSS fun again. Sass is an extension of CSS₃, adding [nested rules](#), [variables](#), [mixins](#), [selector inheritance](#), and [more](#). It's translated to well-formatted, standard CSS using the command line tool or a web-framework plugin.

Sass has two syntaxes. The most commonly used syntax is known as "SCSS" (for "Sassy CSS"), and is a superset of CSS₃'s syntax. This means that every valid CSS₃ stylesheet is valid SCSS as well. SCSS files use the extension `.scss`.

The second, older syntax is known as [the indented syntax](#) (or just ".sass"). Inspired by [Haml](#)'s terseness, it's intended for people who prefer conciseness over similarity to CSS. Instead of brackets and semicolons, it uses the indentation of lines to specify blocks. Files in the indented syntax use the extension `.sass`.

◆ [Editor Support](#)

◆ [Development](#)

Sass

Sass – Original syntax

- Syntactically Awesome Stylesheets
- Indented format
 - White space matters
 - No curly brackets or ;
- .sass extension

```
1  ul.inline li
2    padding: 0px
3    margin: 1em 0em
4    display: block
5    a
6      color: $white
7      padding: 0em
8      margin: 1em
```

SCSS – Newer syntax

- Sassy CSS
 - White space doesn't matter
 - Uses curly brackets and ;
- .scss extension
- Any valid CSS is valid SCSS

```
1  ul.inline li {
2    padding: 0px;
3    margin: 1em 0em;
4    display: block;
5    a {
6      color: $white;
7      padding: 0em;
8      margin: 1em;
9    }
10 }
```

Functionally identical, SCSS most commonly used

Sass Code Examples

Nesting

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#nested_rules

```
nesting.scss ×
1 article·{
2   ·margin:·2em·0;
3   ·h1·{
4     ··color:·#005bcc;
5   ·}
6   ·ul·{
7     ··list-style:·none;
8     ··padding:·10px·0;
9     ··li·{
10      ···display:·inline;
11      ···a·{
12        ····text-decoration:·none;
13      ···}
14    ··}
15  ·}
16 }
17
```

```
nesting.css ×
1 article·{
2   ·margin:·2em·0;
3 }
4 article·h1·{
5   ·color:·#005bcc;
6 }
7 article·ul·{
8   ·list-style:·none;
9   ·padding:·10px·0;
10 }
11 article·ul·li·{
12   ·display:·inline;
13 }
14 article·ul·li·a·{
15   ·text-decoration:·none;
16 }
17
```

Variables

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#variables

```
variables.scss
1
2 $path: "/images/";
3 $blue: #1ea8ff;
4 $serif: georgia, times, serif;
5 $sans: arial, trebuchet, sans;
6
7 body {
8   background: url("#{ $path }/texture.jpg");
9 }
10
11 h1 {
12   font-face: $sans;
13   color: $blue;
14 }
15
16 p {
17   font-face: $serif;
18   color: darken($blue, 10%);
19 }
20
```

```
variables.css
1 body {
2   background: url(/images//texture.jpg);
3 }
4
5 h1 {
6   font-face: arial, trebuchet, sans;
7   color: #1ea8ff;
8 }
9
10 p {
11   font-face: georgia, times, serif;
12   color: #0090ea;
13 }
14
```

Parent References

sass-

lang.com/docs/yardoc/file.SASS_REFERENCE.html#referencing_parent_selectors

```
parent.scss
1  div a {
2    color: #ce4dd6;
3    &:hover { color: #ffb3ff; }
4    &:visited { color: #c458cb; }
5  }
6

parent.css
1  div a {
2    color: #ce4dd6;
3  }
4  div a: hover {
5    color: #ffb3ff;
6  }
7  div a: visited {
8    color: #c458cb;
9  }
10
```

Mixins

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#mixins

```

mixin.scss
1 @mixin nav-list {
2   list-style-type: none;
3   padding: 0;
4   margin: 0;
5   > li {
6     display: block;
7     float: left;
8     &:last-child {
9       margin-right: 0px;
10    }
11  }
12 }
13
14 ul {
15   @include nav-list;
16 }
17

mixin.css
1 ul {
2   list-style-type: none;
3   padding: 0;
4   margin: 0;
5 }
6 ul > li {
7   display: block;
8   float: left;
9 }
10 ul > li:last-child {
11   margin-right: 0px;
12 }
13
```

Arguments

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#mixin-arguments

```
arguments.scss
1 // Rems/px font sizing - Variables & Mixin
2 // Set rem and em to 10px := 16px * .625
3 html { font-size: 62.5%; }
4 $base-font-size: 10px;
5 $rem-ratio: $base-font-size / 1rem;
6
7 @mixin rem($key, $px) {
8   #{ $key}: $px;
9   #{ $key}: $px / $rem-ratio;
10 }
11
12 p {
13   @include rem(font-size, 16px);
14 }
15
16 .box {
17   @include rem(padding, 10px);
18 }
19

arguments.css
1 html {
2   font-size: 62.5%;
3 }
4
5 p {
6   font-size: 16px;
7   font-size: 1.6rem;
8 }
9
10 .box {
11   padding: 10px;
12   padding: 1rem;
13 }
14
```

Extends

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#extend

```
extend.scss
1  .box {
2    border: 2px solid black;
3    margin: 1em;
4    width: 200px;
5  }
6
7  .big-box {
8    @extend .box;
9    width: 300px;
10 }
11
12 .little-box {
13   @extend .box;
14   width: 100px;
15 }
16

extend.css
1  .box, .big-box, .little-box {
2    border: 2px solid black;
3    margin: 1em;
4    width: 200px;
5  }
6
7  .big-box {
8    width: 300px;
9  }
10
11 .little-box {
12   width: 100px;
13 }
14
```

Comments

sass-lang.com/docs/yardoc/file.SASS_REFERENCE.html#comments

```
comments.scss
1  h1 {
2    font-size: 2em;

13
```

Codepen

codepen.io/pen/

The screenshot shows the Codepen web editor interface. At the top, the 'CODEPEN' logo is on the left, a 'Save' button is in the center, and 'Login / Sign up' is on the right. Below the header, there are two code editors. The left editor is titled 'HTML' and contains the following code:

```
<body>
  <article>
    <h1>Pirate Ipsum</h1>
    <p>Mizzen belaying pin boatswain heave down</p>
  </article>
</body>
```

The right editor is titled 'CSS (SCSS)' and contains the following code:

```
$scuttle: #554331;
$brig: 2em;

body {
  background-color: $mutiny;
  article {
    background-color: $arggg;
    padding: {
      left: $brig / 3;
    }
    h1 {
      color: $scuttle;
      font-size: $brig;
    }
    p {
      color: shade($scuttle, 10%);
    }
  }
}
```

Below the code editors is a preview of the rendered page. It features a dark brown header bar with the text 'Pirate Ipsum' in a large, bold, red serif font. Below the header is a light tan background with the text 'Mizzen belaying pin boatswain heave down' in a dark brown serif font. The bottom of the preview is a dark brown footer bar.

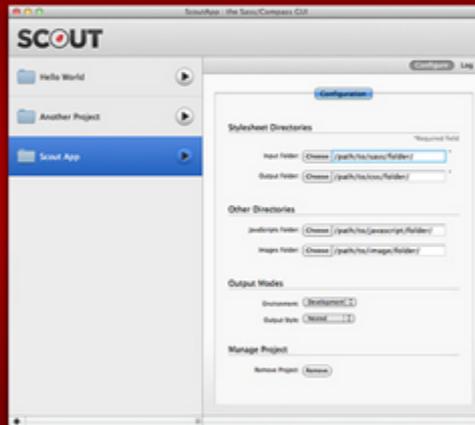

Scout

Compass is a stylesheet authoring framework that makes your stylesheets and markup easier to build and maintain. With compass, you write your stylesheets in **Sass** instead of plain CSS.

Compass.app is a menubar only app for Sass and Compass. It helps designers compile stylesheets easily without resorting to command line interface.

Compass.app is written in Java (JRuby) and made in love, financed by You do not need to

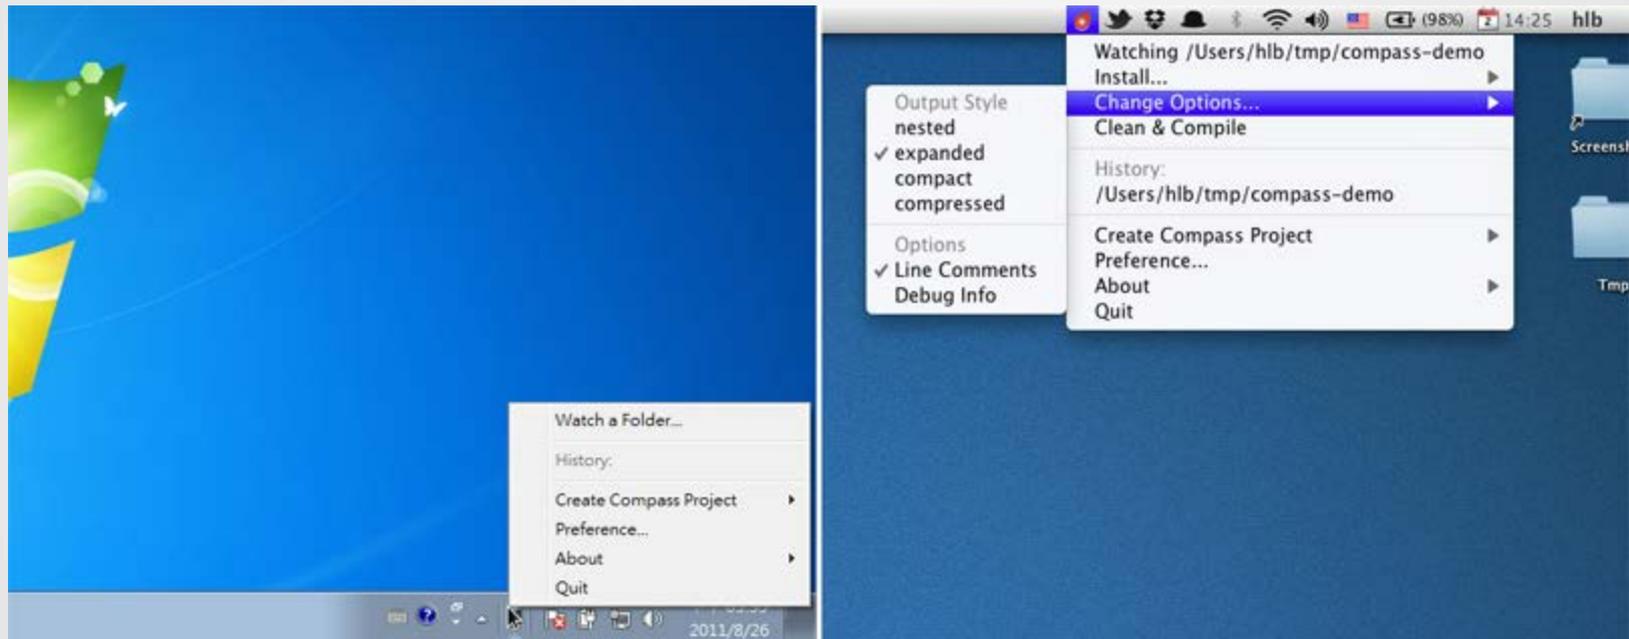

We also made **Fire.app** - The fast prototyping tool

Compass is an open-source *CSS Authoring Framework*.

♥ Why designers love Compass.

1. Experience cleaner markup without presentational classes.
2. It's chock full of the web's best [reusable patterns](#).

✔ Compass uses Sass.

[Sass](#) is an extension of CSS3 which adds nested rules, variables, mixins, selector inheritance, and more. Sass generates well formatted CSS and makes your stylesheets easier to organize and maintain.

Compass

```
scott@ubuntu: /var/www/new
scott@ubuntu:/var/www/new$ compass watch
>>> Compass is polling for changes. Press Ctrl-C to Stop.
>>> Change detected at 10:28:33 to: style.scss
overwrite css/style.css
>>> Change detected at 10:28:46 to: style.scss
overwrite css/style.css
>>> Change detected at 10:28:54 to: style.scss
identical css/style.css
>>> Change detected at 10:29:06 to: style.scss
error scss/style.scss (Line 7: Invalid CSS after " font-fa
family:": expected pseudoclass or pseudoelement, was " "Juice";")
overwrite css/style.css
>>> Change detected at 14:09:31 to: style.scss
error scss/style.scss (Line 7: Invalid CSS after " font-fa
family:": expected pseudoclass or pseudoelement, was " "Juice"")
overwrite css/style.css
```

Compass

compass-style.org/reference/compass

A screenshot of the Compass website's reference page for the Core Framework. The page has a dark theme. At the top left is the 'compass' logo. To its right are navigation links: 'Reference' (highlighted in red), 'Help', 'Blog', 'Get Involved', and 'Install'. A search box on the right contains the text 'Search the docs'. Below the navigation is a horizontal menu with tabs: 'Blueprint', 'Core' (selected), 'CSS3', 'Helpers', 'Layout', 'Reset', 'Reset (legacy)', 'Typography', and 'Utilities'. The 'CSS3', 'Helpers', 'Layout', 'Reset', 'Reset (legacy)', 'Typography', and 'Utilities' tabs are circled in yellow. Below the tabs, the version '0.12.2' is shown on the left, and 'SCSS' and 'sass' buttons are on the right. The main content area has the heading 'Compass Core Framework' with a 'Source on Github' link. Below the heading is a paragraph: 'The compass core framework is a design-agnostic framework that provides common code that would otherwise be duplicated across other frameworks and extensions.' This is followed by a code block: 'This file can be imported using: @import "compass"'. Below that is a section titled 'Imports' with a list of three items: 1. [CSS3](#) - Provides cross browser CSS3 mixins that take advantage of available pre-spec vendor prefixes. 2. [Typography](#) - Provides basic mixins for common typography patterns. 3. [Utilities](#) - Provides basic mixins for common styling patterns. On the left side of the page, there is a sidebar with a 'Compass Core' section containing a list of links: 'CSS3', 'Helpers', 'Layout', 'Reset', 'Reset (legacy)', 'Typography', and 'Utilities'. At the bottom of the sidebar is a small image of a conference poster for 'CSS Dev Conf 2013' with the text 'Powered by Fusion'.

Compass CSS3

[Source on Github](#)

The CSS3 module provides cross-browser mixins for CSS properties introduced in CSS3, for example `border-radius` and `text-shadow`.

What rendering engines you support for the experimental css properties is governed by the configurable variables defined in [the browser support module](#).

This file can be imported using: `@import "compass/css3"`

Imports

1. [Appearance](#) – Specify the CSS3 appearance property.
2. [Background Clip](#) – Specify the background clip for all browsers.
3. [Background Origin](#) – Specify the background origin for all browsers.
4. [Background Size](#) – Specify the background size for all browsers.
5. [Border Radius](#) – Specify the border radius for all browsers.
6. [Box](#) – This module provides mixins that pertain to the CSS3 Flexible Box.
7. [Box Shadow](#) – Specify the box shadow for all browsers.
8. [Box Sizing](#) – Specify the box sizing for all browsers.
9. [Columns](#) – Specify a columnar layout for all browsers.
10. [Filter](#) – Specify the (image) filter for all browsers.
11. [Font Face](#) – Specify a downloadable font face for all browsers.

Mixins

```

mixin.scss
1 @mixin nav-list {
2   list-style-type: none;
3   padding: 0;
4   margin: 0;
5   > li {
6     display: block;
7     float: left;
8     &:last-child {
9       margin-right: 0px;
10    }
11  }
12 }
13
14 ul {
15   @include nav-list();
16 }
17

mixin.css
1 ul {
2   list-style-type: none;

Using Sass and Compass with Omega 3.x

[View](#) [Edit](#) [Revisions](#)

Last updated July 18, 2013. Created by [Mark123](#) on October 10, 2012. Edited by [screenack](#), [bisonbleu](#), [wheatpenny](#). You can edit this page, too.

[Sass](#) is a CSS pre-processor, and [Compass](#) a library of Sass code. While both will be part of Omega 4.x, you can incorporate them into 3.x as well without much difficulty. Instructions for installation of Sass and Compass may be found at the [Compass website](#). Note however, that at least for the Mac, the command listed there of `gem install compass` improperly installed files for me. Adding 'sudo' was necessary: `sudo gem install compass`. Once Sass and Compass are installed, the following instructions will incorporate them into an Omega subtheme.

Note: "sass" and "scss" are two different syntaxes for creating your preprocessor stylesheets. These instructions presume you'll use "scss" variant. Substitute "scss" with "sass" as necessary. Also note that regardless of your preferred syntax, the commands

About this page

Drupal version
Drupal 7.x

Audience

Sass, Compass and Omega

- `compass create . --sass-dir=scss --css-dir=css --bare`

```
config.rb  x
1  # Require any additional compass plugins here.
2
3  # Set this to the root of your project when deployed:
4  http_path = "/"
5  css_dir = "css"
6  sass_dir = "scss"
7  images_dir = "images"
8  javascripts_dir = "javascripts"
9
```

- Copy all files from `css` folder to `scss` folder
- Rename all `.css` files to `.scss`

Sass, Compass and Omega

<theme>/scss

-  _fonts.scss
-  _mixins.scss
-  _text.scss
-  global.scss
-  skull5-alpha-default.scss

<theme>/css

-  global.css
-  skull5-alpha-default.css
